8.2 Exposure controls

- Personal protective equipment
- General protective and hygienic measures: Wash hands during breaks and at the end of the work.
- Breathing equipment: Not required.
- Protection of hands:
  The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
  Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

- Material of gloves
  Nitrile rubber, NBR
  The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and
  varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of
  the glove material can not be calculated in advance and has therefore to be checked prior to the application.
  Recommended thickness of the material: ≥ 0.4 mm
- Penetration time of glove material
  The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be
  observed.
  For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes (Permeation
  according to EN 374 Part 3: Level 6).
  Value for the permeation: Level ≤ 6
- Eye protection: Safety glasses recommended during refilling.
