- Personal protective equipment
  - General protective and hygienic measures
    The usual precautionary measures should be adhered to in handling the chemicals.
  - Breathing equipment: Not required.
  - Protection of hands:
    The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
    Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
  - Material of gloves
    Nitrile rubber, NBR
    The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and
    varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of
    the glove material can not be calculated in advance and has therefore to be checked prior to the application.
    Recommended thickness of the material: \( \geq 0.4 \text{ mm} \)
  - Penetration time of glove material
    The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be
    observed.
    For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes (Permeation
    according to EN 374 Part 3: Level 6).
    Value for the permeation: Level \( \leq 6 \)
  - Eye protection: Safety glasses recommended during refilling.
